How to extend a line:

A Line can be extended to meet other lines or objects precisely at their boundaries. In this tutorial we will use the extend symbol from the modify tool bar.

Method 1:

1. Select the extend symbol \[\text{extend symbol}\] from the modify menu.
2. Select the intersected object to extend to.
3. Hit Enter.
4. Select the line you want to extend.

Method 2:

1. Select the line you want to extend. (The grip will be automatically highlighted in blue).
2. Pick a grip from the line.
3. Drag the line from the end grip or side that you want to extend. (This is also a stretch method).
